

dRTA Patient Advocacy Community is forming

We need your help!

Do you or anyone you know live with a rare kidney condition known as dRTA?

Distal renal tubular acidosis (dRTA) is a rare kidney disorder that can be hereditary or caused by disease or medications, and some with the hereditary form can have varying degrees of **hearing loss**, at times progressing to deafness.

If you know of patients/families who are impacted by hereditary dRTA, also known as Primary dRTA, **please inform them of an opportunity to participate in a 30-45 minute survey.**

- Participants will help to inform the development of a dedicated hereditary dRTA patient advocacy community in the United States.
- Participants will receive a \$75 Amazon gift card for their time.
- *If you or someone you know qualifies for this survey, please*
 - Email Joff Masukawa at joff@diligentiastrategy.com

About hereditary dRTA:
